

File Proj: #4065
18th Sept.

[redacted] were here on Project
DIMVIEW work the week of Sept. 14th. They were hoping to confront either
you or [redacted] with the results and their predicament on the image
integration project.

They had tried by telephone to communicate with you before their trip
here.

It seems that the results of the image integration experiments were really
not very informative nor was anything proven one way or the other. The root
of the difficulty seems to be that they need an higher-speed projector which
can take them into the faster realms of integration (what a concept!!)

However, they need to know if such projectors are available on the market
or, as they suspect, would have to be specially fabricated for their specific
experimental use. They are exceeding the money allowed in the fixed price
contract, so would like to know what sort of an expense this piece of machinery
would involve.

They are holding off submitting the report until they can meet with you and/or
[redacted] They are due back here the week of the 28th to administer tests
to P.I.s for DIMVIEW. I suggest that you check with [redacted] for their
exact schedule. However, they will undoubtedly be very busy on our project,
so I also suggest that you bid for some of their time through Frank before
they arrive. That way they can plan to dedicate some sensible amount of time
to a talk with you -- in advance.

This is a pretty skimpy report, but I thought some version of the information
should reach you on your return. I doubt if they have been negligent; it's more
like they want to deliver their dilemma in person!!

just OLE!

ROBIN
for your info & comment.
